Product Description

GiANT Loaders - G2700E Electric Loader

The G2700E combines the best of both worlds with the advantages of an articulated loader and near-silent operation without emissions. The electric loader is ideal for working in buildings, in farm operations, on construction or demolitions sites or in urban areas.

The Giant G2700E comes standard equipped with a Jungheinrich 520 Ah, 48V lithium-ion battery that fills the space where traditionally the engine can be found. With two separate electric motors, 7 kW for the drive train and 12 kW for the working hydraulics, there is always sufficient power to work precisely and efficiently.

Furthermore, the machine regenerates energy when the machine brakes or drives downhill. The G2700E with regular boom has a hinge pin height of up to 116.6 inches and the X-Tra boom version has a tipping load of up to 5732 lbs.
