Product Description

BCS America Utility Trailer - 92148701

Haul and ride with the BCS Utility Trailer! With an 1100-lb capacity, this heavy-duty trailer includes a padded seat along with foot and parking brakes and a removable tailgate. An easy-to-use dump feature also allows owners to get rid of their haul smoothly and effectively.

The Utility Trailer attaches when the tractor's handlebars are set in the rear-mount setting only. A Curved Coupler is required to mount the Utility Trailer for easy attachment and removal. The Curved Coupler's design keeps the tractor level and the tiller tines out of the ground while the trailer is attached, which means you can leave your tiller attachment connected while operating the Utility Trailer. Shift into the transport speed, and the trailer will serve double duty as a great runabout!

Due to the 33" Rear-Tine Tiller's large size, it cannot be mounted when the Utility Trailer is installed on model 750.

Note: The Utility Trailer is intended for haulage and transport applications only. No implements can be operated while the Utility Trailer is mounted.
