Product Description

BCS America 30" RollerBlade Flail - 921C0977

The BCS RollerBlade Flail Mower is ideal for shredding cover crops for quick decomposition.

We recommend that market gardeners seriously consider the RollerBlade when comparing its features to the standard Flail Mower. It has several differences, including a full-length roller with an easy-to-use crank handle that provides an infinite range of mowing heights, ranging from 0.5 to 2.5 inches.

This roller is beneficial for the following reasons:

- Prevents "scalping" when the mower is adjusted to its lowest height setting, even on soft soil or raised garden beds.
- Easier to traverse rough terrain (such as V-ditches) because the roller is located closer to the tractor wheels than skids or caster wheels. This reduces the overall length of the machine.

The RollerBlade features wider and thicker blades than the standard Flail Mower, plus a lower dome-shaped housing which produces a smaller particle size in a single pass. The RollerBlade is currently available in a 30" cutting width only.

FEATURES

- Lower dome produces smaller particle size in a single pass.
 - Full-length roller that is adjusted via easy-to-use crank handle.
 - Cutting height range from 0.5 to 2 inches.
 - Wider and thicker blades than standard Flail Mower.
 - 30" width only.
-
