Product Description

BCS America Ridger - DMW002AD

The Ridger implement allows BCS owners to create ridges and furrows in previously tilled soil. So after the seedbed has been prepared by a BCS tiller, the Ridger can move the loose soil to the desired height and position.

When two Ridgers are attached to the Straight Bar, the operator can leave a width of undisturbed soil, thus creating a walkway between the two rows of hilled crops.

The Ridger easily slides and fastens onto any Tool Carrier accessory and is height-adjustable, set by a bolt on the preferred Tool Carrier.

Required Accessory: Tool Carrier Kit

Recommended Accessories:

- Wheel Weights
- Straight Bar (to drag multiple Ridgers)

FEATURES

- Adjustable wings to set the width of the furrow.
 - Wing span can reach up to 21" wide.
 - Easily attaches to any Tool Carrier accessory.
 - Dual furrow action when two Ridgers are installed on the Straight Bar Tool Carrier.
-
