### Product Description

## BCS America V-Cultivator - DMW005D

The V-Cultivator (also called a Spring Tine Cultivator) is versatile and easy to use. Easily connected to an Adjustable Tool Carrier, the V-Cultivator has the ultimate variable width. The bars collapse or widen to a width of up to 31 inches, and five adjustable teeth can be situated according to the needs of the operator. Adjusting the width of the cultivator is easier than that of a BCS Tiller, with an adjustable wing nut situated in the center of the implement to expand or retract the wings.

The V-Cultivator is great for weed control in between narrow rows of small-scale crops, and can operate between a maximum of six crop rows per pass. Another advantage of the V-Cultivator is that stones easily glance off the tines without getting bogged down within the implement, eliminating the risk of crop damage. The V-Cultivator comes with five removable tines and a removable transport wheel.

Required Accessory: Tool Carrier Kit

Recommended Accessory: Wheel Weights or Wheel Weight Hangers
